

CIVIL 3D FOUNDATION TEMPLATE FOR LADOTD PROJECTS

Save time and money with pre-configured Civil 3D Styles

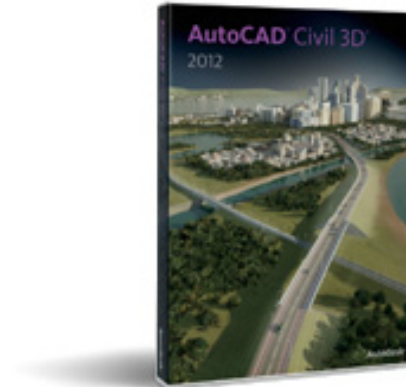

What is a Civil 3D Foundation Template for LaDOTD Survey Standards?

Replace disorganized, user managed survey data collection standards based on legacy workflows with Survey standards used by the Louisiana Department of Transportation and Development (LaDOTD) and applied in AutoCAD Civil 3D. A Civil 3D-based Survey Standards template containing pre-configured codes, symbols, and linework is the first step in implementing Civil 3D's Field-to-Finish functionality and is a requirement to take full advantage of the benefits in new workflows that Civil 3D enables.

The Civil 3D Foundation Template for LaDOTD Survey Standards contains a library of LaDOTD survey codes that use the LaDOTD's required graphics standards, including symbols and field entry codes. By starting your LaDOTD design projects with a Civil 3D Foundation Template for LaDOTD Survey Standards, you will slash survey processing and drafting costs and spend more time creating dynamic, innovative designs.

Benefits

- Reduce survey processing and drafting costs
- Improve communication between field and office personnel
- Automate tedious and repetitive drafting tasks
- Quickly produce construction documents using LaDOTD Survey Standards
